EXPERIENCE

Treinee

Ethos

📅 January 2018 – August 2018 📍 Minas Gerais, Brazil

- Developed a new platform to connect Totvs and Pipefy.
- Used the APIs from those platforms to access datas.
- Technologies involved:
 - Back-end: Python, Django, SQL
 - Front-end: Bootstrap, HTML5, JS, CSS3

Data Scientist

Federal University of São João

📅 January 2019 – Present 📍 Minas Gerais, Brazil

- Make a good recommender system for a database.
- Different approaches were tested, such as: file similarity, Pearson similarity among users. We currently try to use a hybrid approach with the methods tested to generate an effective recommendation.
- Technologies involved: Python, Pandas, Igraph, Matplotlib, Numpy.

PROJECTS

COALA

Open Source

📅 August 2018 - December 2018

- This project is an entertainment platform for deaf children.
- It counts with YouTube videos and games.
- contandolibras.herokuapp.com/
- Technologies involved:
 - Back-end: Django, SQL
 - Front-end: Bootstrap, HTML5, JS, CSS3

COALA, RECOMMENDER VIDEOS

Open Source

📅 December 2018 - Present

- Based on the videos in COALA repository, it was made a crawler on Youtube and extract their datas.
- The approach used were the similarity of videos data to recommender another video.
- Technologies involved: Python, Pandas, Igraph.
